

Web Development using React — Assignment 3 (Optional)

Min Wu <minwu.training@gmail.com>

In tonight's class (class 5), we discussed how React code can get server-side data through RESTful API using `redux-thunk` and `axios`. You also have your local ExpressJS server running.

Please integrate tonight's class in `simpleKanban` into class 4's kanban project so that it will display `Card` information from the server side, instead of the hard-coded data in the `card-reducer`.
