
Redux Thunk

- ❖ Redux Thunk middleware allows you to write action creators that **return a function instead of an action**. The thunk can be used to delay the dispatch of an action, or to dispatch only if a certain condition is met.
- ❖ A Promise is a proxy for a value not necessarily known when the promise is created. It allows you to **associate handlers with an asynchronous action's eventual success value or failure reason**.
- ❖ Axios is a promise-based HTTP client.
 - ❖ `npm install --save axios`
